

COMPACT SOLID STATE VIDEO RECORDER ADV-21

- Optimized for video and audio, not a modified data recorder
- Play back on any PC or notebook computer
- Ultra compact and lightweight
- Records on standard Compact Flash cards
- Over 5 hours recording time
- Low power consumption
- Airborne qualified

Solid State Video Recorder by Sekai
“Video recording and playback made easy”

FEATURES

- Records one video and two audio channels
- NTSC and PAL compatible
- Motion JPEG compression
- Selectable compression ratio
- Dual CF card interfaces for removable media
- Discrete and serial remote control interfaces
- Input for time and date stamping

**See Sekai for recommended CF Cards*

GENERAL DESCRIPTION

The Sekai ADV-21 is a compact and rugged solid state video recorder for airborne applications where excellent video quality and ease to use is prioritized. Two audio channels can be recorded together with either Composite or Y/C video. The recorder accepts both NTSC and PAL video formats.

Motion JPEG recording format with scalable compression offers best picture quality available and maximum flexibility. User selectable compression rates range from 4:1 to 30:1, and recording times average from 4 to 20 minutes per GB. With two 32GB CF memory modules the maximum recording times range from 200 minutes up to 1200 minutes, over 20 hours! Even at the highest compression ratio the image quality is better than analog recorders. At the lower compression ratios the image quality exceeds that of the best industrial and consumer video recorders.

Playback is made simple with the removable CF media; use an off-the-shelf adapter to plug these modules right in to any modern PC or Macintosh computer. No proprietary software from Sekai is required to view the video. The video files can also be downloaded directly from the recorder to a computer via the front accessible USB 2.0 port.

A rugged aluminum housing protects the recorder from the environment and EMI. A Gore-Tex™ vent prevents condensation build up and makes the unit practically maintenance free. The recorder can be powered directly from the vehicle with the built in 28VDC converter.
