

COMPACT MODULAR VIDEO RECORDER

- Airborne docking station for two recording modules
- Records on standard Compact Flash (CF) cards
- Compact record and playback module
- Connect module directly to a TV monitor for playback
- Tamper proof modules for securing evidence
- Airborne qualified

Solid State Video Recorders by Sekai
"Video recording and playback made easy"

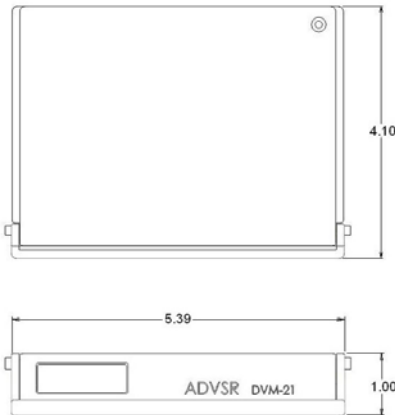

FEATURES

- Each module records one video and two audio channels
- NTSC and PAL compatible
- Motion JPEG compression
- Selectable compression ratio
- Discrete and serial remote control interfaces
- Input for time and date stamping

GENERAL DESCRIPTION

The Sekai ADV-D2 is a compact airborne docking station that supports up to two digital video modules. The docking station provides I/O interface and power interface to the aircraft for the modules. Mechanical mounting interface is provided by hooks and guide pin receivers with a standard foot print compatible with many existing mounting trays.

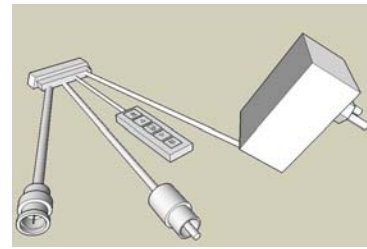

Two digital video modules DVM-21 can be operated with the docking station, each module records one video channel and two audio channels. The DVM-21 takes two CF-cards as recording media, now available in sizes up to 16GB/each allowing broadcast quality recordings up to 2 hours and reduced quality recordings over 8 hours for each module. The motion JPEG recording format with scalable compression offers the best picture quality available and maximum flexibility for the user. The DVM-21 can be connected directly to a TV monitor with a simple playback cable set, or the video can be downloaded to a computer with the standard USB 2.0 interface.

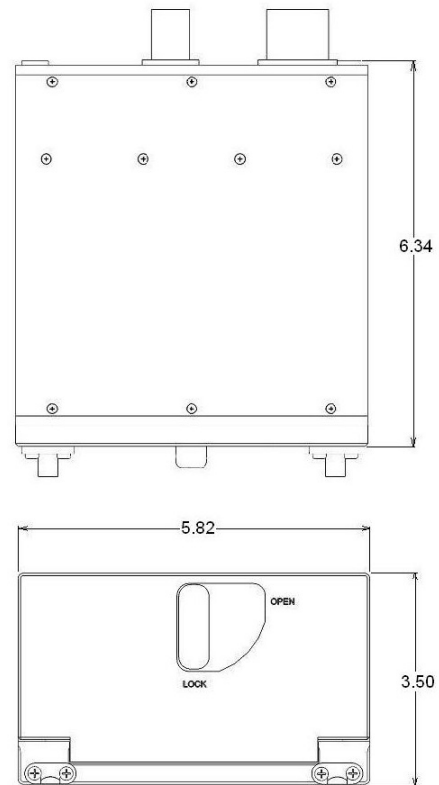

Sekai DVM-21 Dimensions

Sekai also offers a series of specially tamper protected video recording modules, the ADV-LAW series with 8, 16 or 32GB preinstalled memory. The ADV-LAW modules are specially designed for law enforcement applications where video recordings may be used as evidence in court of law. The ADV-LAW module has tamper proof seals to prevent the unit from being opened and only provides analog video and audio in / out, effectively protecting the material from tampering or editing.
